GRID-VIEW® was developed specifically to address inadequacies in the post operative handling of surgical breast biopsy specimens and multiple core biopsy specimens. Its unique design and radio-opaque grid provide an efficient system for imaging, transporting and identifying breast biopsies. The clamshell design, for example, was chosen to accommodate larger specimens without compromising performance or convenience. GRID-VIEW® will contain specimen fluids.

GRID-VIEW® are available in three grid patterns and can be purchased as a carton of 12 units, or as a case of 12 cartons (144 units).

**Benefits**

- Reduces surgery time through improved imaging turn-around
- Improves communication between surgery, radiology and pathology
- Eliminates physical handling of specimens in radiology
- Eliminates the need for needles or wires
- Reduces risk of exposure to blood-borne pathogens

US PATENT # 5383472
Grid-View can now be purchased in cartons of 12 units or a case quantity of 12 cartons. (144 units)
When Ordering specify CIRS Part Number (i.e. 240A for Carton of 12 units Grid-View “A”)

Clam shell design compresses larger specimens for improved image contrast and contains specimen fluids.

**EXAMPLE:**

1. Biopsy Tissue is placed in GRID-VIEW® container.

2. GRID-VIEW® container is delivered to Radiology for confirmation image.

3. GRID-VIEW® container with biopsy is delivered undisturbed to pathology with the X-ray image.

4. Specimen is compared with x-ray image by pathologist for isolation of suspect tissue or calcifications.
